

## Module 9 Assignment

---

### Problem Statement:

You work for xyz organization. Your organization uses AWS cloud to host their web applications.

### You have been asked to:

1. Create a Beanstalk environment to host a PHP “Hello World” application (Note – use any language runtime)
2. Upload a new PHP file which reads “Updated Hello World” to the Beanstalk environment
3. Create a Lambda Function which uses SNS notification as a trigger.
4. Launch a OpsWork stack and host a Hello World html page in the instance of that stack
